

AS-IS / TO-BE Process Flow

Online Food Delivery Platform

1. Document Control

Attribute	Details
Document Name	AS-IS / TO-BE Process Flow
Project	Online Food Delivery Platform
Version	1.0
Prepared By	Lalita Khatri
Date	06-Jan-2026
Status	Draft

2. Purpose

This document describes the current state (AS-IS) and future state (TO-BE) business processes for food ordering and delivery.

It highlights process inefficiencies, improvements, and expected benefits after system implementation.

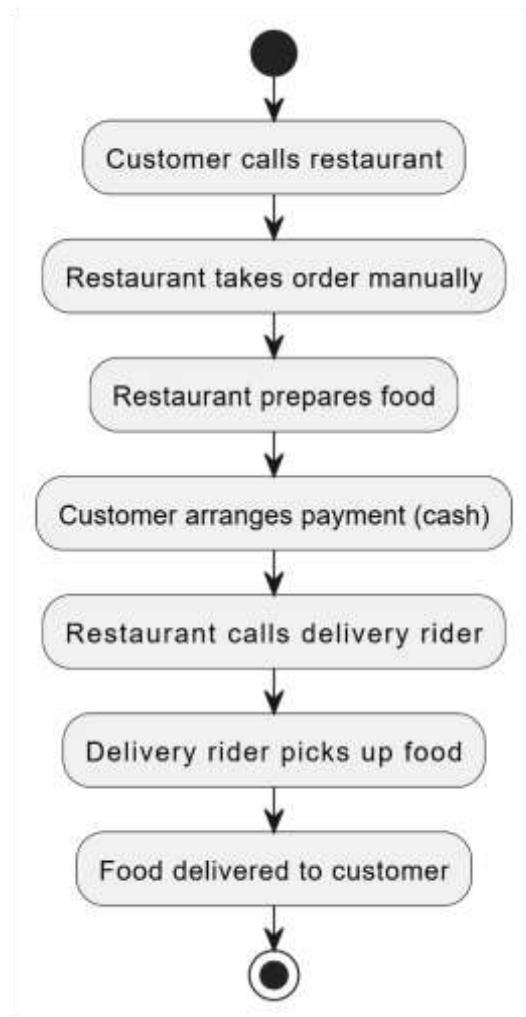

3. AS-IS Process Overview (Current State)

The AS-IS process represents a traditional or semi-digital food ordering model, with limited automation and visibility.

AS-IS Process Characteristics

Area	Description
Ordering	Phone calls or basic apps
Payment	Mostly cash-based
Order Tracking	Manual or unavailable
Delivery Assignment	Manual coordination
Reporting	Limited or none

4. AS-IS Process Flow (UML – Activity Diagram)

5. AS-IS Process Pain Points

Pain Point	Impact
Manual order handling	High error rate
No real-time tracking	Poor customer experience
Cash dependency	Payment disputes
Delayed delivery assignment	Longer delivery time
No analytics	Poor business decisions

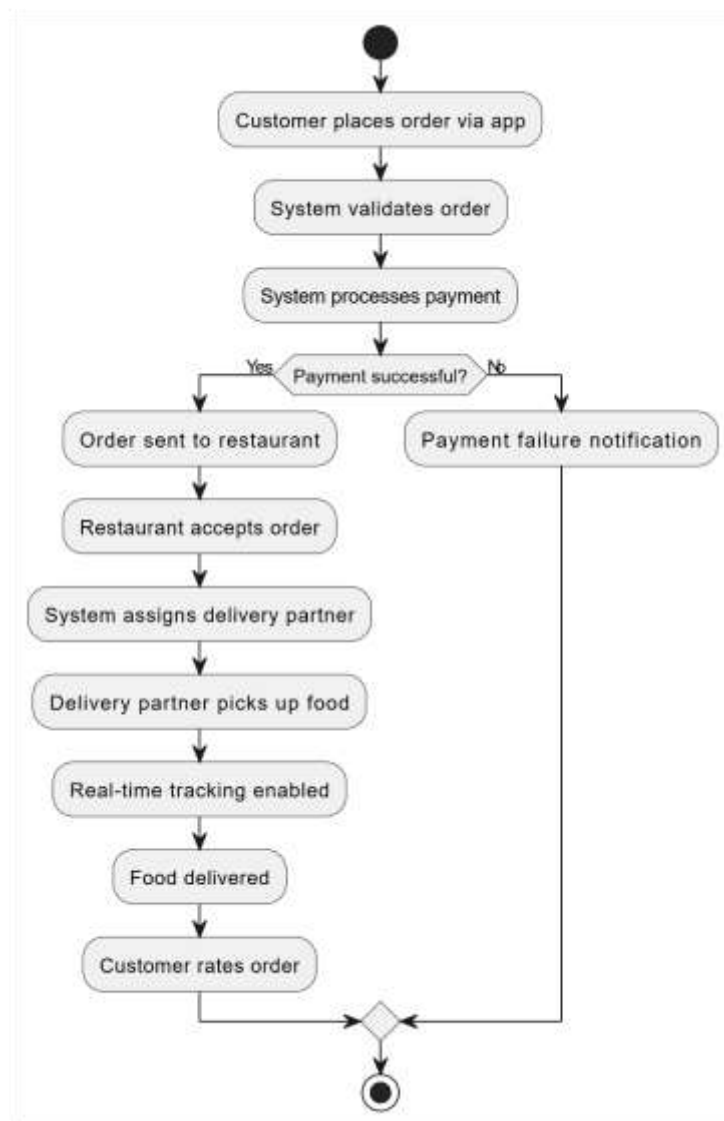

6. TO-BE Process Overview (Future State)

The TO-BE process represents the automated, digital workflow enabled by the Online Food Delivery Platform.

TO-BE Process Characteristics

Area	Description
Ordering	Web & mobile apps
Payment	Secure digital payments
Order Tracking	Real-time visibility
Delivery Assignment	Automated
Reporting	Real-time dashboards

7. TO-BE Process Flow (UML – Activity Diagram)

8. AS-IS vs TO-BE Comparison

Aspect	AS-IS	TO-BE
Order Placement	Manual	Fully digital
Payment	Cash	Online & COD
Tracking	Not available	Real-time
Delivery Assignment	Manual	Automated
Customer Feedback	None	Ratings & reviews
Reporting	Manual	Automated analytics

9. Business Benefits of TO-BE Process

Benefit	Description
Faster order processing	Reduced delays
Improved accuracy	Less human error
Better customer satisfaction	Transparency
Scalability	Supports growth
Data-driven decisions	Real-time insights

10. Assumptions

Assumption
Users have smartphone or web access
Restaurants adopt digital workflows
Delivery partners use mobile apps
Payment gateways are reliable

11. Risks and Mitigation

Risk	Mitigation
User resistance	Training and onboarding
Technical downtime	High-availability setup
Payment issues	Multiple gateways

12. Conclusion

The TO-BE process significantly optimizes the food ordering lifecycle, replacing manual steps with automated, transparent, and scalable workflows, directly supporting business objectives and customer satisfaction.
